

Be part of the solution, not the pollution

Caption: This photo was taken near Robertson Park on 24/07/24

Description:

Improper trash disposal harms plant life and hinders their growth. It also poses dangers to animals, such as birds and small creatures, who may become trapped in bottles or jars, leading to starvation. Additionally, aquatic animals are at risk of ingesting or getting entangled in plastic waste, leading to harmful consequences. The introduction of harmful chemicals

into the soil and water can have adverse effects on both humans and animals. It's important to note that approximately 60% of water pollution is caused by the improper disposal of plastic bottles.
